

FOR IMMEDIATE RELEASE

Second Street lighting installation scheduled for week of October 15

Work on high mast lighting fixtures will require road and ramp restrictions

BLOOMINGTON, Ind. (October 12, 2018) – Next week crews will begin assembling high mast tower lighting fixtures for placement at various positions in the I-69 Second Street interchange. Fixtures and poles are being assembled on the ground and should not impact traffic, but motorists are urged to be aware of crews in the area.

Once assembled, the high mast lighting towers will be set beginning Monday, October 15 with work continuing through Friday, October 19, weather permitting. The existing high mast towers at 2nd Street will be removed as the new fixtures are installed.

Because crews will be working at multiple locations in the interchange, motorists should anticipate lane restrictions on the bridge and in the ramp system throughout the week.

The high mast lighting system requires new electrical service points, which have been ordered from Duke Energy and are anticipated to be installed when Duke crews return from Hurricane Michael restoration efforts. Until electric service for the high mast lighting is restored, those fixtures will remain dark.

Existing street lighting along 2nd Street will be unaffected by the high mast installation.
